

# Academics

At the DG we boast a sheer commitment to excellence in teaching. Our faculty staff does provide top-quality lecturing on the widest range of disciplines, such as paleontology, stratigraphy, sedimentology, structural geology, engineering geology, mineralogy, petrology, geochemistry, geophysics.

The DG offers courses for degrees programs of first (?Laurea Triennale?) and second (?Laurea Magistrale?) level ([full list](#)), mainly awarded by the Faculty of Sciences: a significant number of courses are also offered for the Faculties of Engineering, Agronomy, and Liberal and Human Arts. Of course, most of our teaching effort is addressed to the **Geological Sciences** and, to a lesser extent, **Natural Sciences Programs**.

The DG also hosts a post-graduate program, namely the **PhD School in Earth Sciences**, which is also a focus for foreign graduate students.

In all, we are confident that all students enrolled in one of the Programs hosted at the DG are equipped to fulfill their scientific and educational needs and to succeed in their forthcoming job. Got questions? Navigating this site may give you some useful information: still, please feel free to [contact us](#) for further details.
